PREFACE

The Endocrinology Index is a bimonthly publication of the National Institute of Arthritis and Metabolic Diseases. This selected bibliography which is produced from the National Library of Medicine's Medical Literature Analysis and Retrieval System (MEDLARS), has been initiated to supply those scientists working in the field of endocrinology with a much needed current awareness tool and is intended to help facilitate greater integration of research and clinical efforts in this field.

The National Institute of Arthritis and Metabolic Diseases is able to make available to qualified investigators in the field of endocrinology a limited number of free copies. Requests from qualified individuals to receive free copies of this publication, address changes, and other communications should be addressed to:

Scientific Communications Office

This publication is also for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Subscriptio price per year in the United States, Canada and Mexico $16.00, foreign additional and $2.75 per single copy. Payment is required in advance, and check or money order should be made payable to the Superintendent Documents.

Use of funds for printing this publication
approved by the Director of the Bureau of
the Budget on October 7, 1968.

Acknowledgment

The Endocrinology Index was compiled with the cooperation and assistance of the staff of the National Library of Medicine. The citations were processed by the Library's computer-based Medical Literature Analysis and Retrieval System (MEDLARS) and were printed from film composed by Graphic Arts Composing Equipment (GRACE), MEDLA high-speed phototypesetter.

EXPLANATION OF FORMAT

period covered by this issue of the bibliography corresponds to the months of Index Medicus. The journal coverage is limited to journals red by Index Medicus, but the Endocrinology Index contains additional ect headings that are not included in Index Medicus. This Endocrinology is arranged in seven sections: 1) Table of Contents; 2) Subject ion; 3) Review Section; 4) Method Section; 5) Author Section; ubject Index; and 7) Author Index.

ect Section

section is for the reader interested in recent literature related to in broad topics. The subject section is divided into eight categories itary, thyroid, etc.). The endocrine pancreas has not been included e it is the subject of another recurring bibliography, Diabetes rature Index. Each category has a preconceived hierarchical ization of subject headings. A particular citation may appear more once if it deals with multiple topics. Each citation to an article ins the full title, first author, and journal reference. If the le is written in a foreign language, the language is indicated. If itation is to a review article, the number of references is given.

r Section

section provides the reader with a list of keywords or index terms ned to each citation. In this section each article appears only The citations are arranged alphabetically according to first author re numbered consecutively. These numbers are then used in the Author ubject Indexes to enable the reader to identify references with ease. omplete citations (including index terms) are found in this section, nly the first three authors are listed. Foreign titles appear in riginal language; these titles have been translated into English in ubject Section. Following each citation are index terms which have assigned to describe the contents of the article. Index terms r in capital letters; some of these are accompanied by subheadings appear in lower case letters; asterisks (*) identify the index terms which articles appear in Index Medicus.

ct Index

f the index terms assigned to the citations appearing in the ography are listed, followed by citation numbers which correspond e numbers in the Author Section. This section is included for the nience of the reader who wishes to select articles falling in ories of his own conception. For example, one who is interested in in binding of a particular hormone could quickly find whether there any articles dealing with this subject by seeing whether there were itation numbers common to the two headings "protein binding" and ame of the specific hormone.

r Index

ames of all authors are listed, followed by citation numbers which spond to the numbers in the Author Section.
